**Memo For:**

**Town of Monument leaders and water users**  
**Town of Palmer Lake leaders and water users**  
**Woodmoor Water and Sanitation District leaders and water users**  
**Donala Water and Sanitation District leaders and water users**  
**Triview Metropolitan District leaders and water users**  
**Pikes Peak Regional Water Authority members**

**From:** Dave Miller *DM*

**Subject:** Colorado's high altitude multibasin pumped water and energy storage solutions

The enclosed documents briefly explain how a single high altitude, multibasin, pumped-storage project could quickly solve escalating renewable water and energy shortages throughout Colorado's five major river basins and the western power grid.

If Colorado's highly conflicted water providers would unite behind an emergency program to evaluate and develop Central Colorado Project's (CCP) innovative water and energy reliability and productivity multiplier capabilities, all stakeholders, including Northern El Paso County water users would soon enjoy assured lower cost water supplies throughout the new millennium.

Your current higher cost plans to dry up irrigated farms and reuse existing water rights to extinction are economically and environmentally not viable under good science and national laws.

I would appreciate opportunities to further explain Central Colorado Project's silver bullet capabilities at your earliest opportunities. Thank you.

**Encls:** Natural Energy Resources Company's recent related documents dated, 2-25-13; 2-6-13; 2-1-13; and 3-12-13.
